

Drive down your fuel costs

With a free fleet review from Energy Saving Trust

Do you know how much your organisation spends on grey fleet expenses?

It is estimated that there are approximately four million grey fleet cars (vehicles that are privately owned or leased by employees but used for business travel) in the UK – more than three times the number of company cars. This can have a significant financial impact on your organisation, not to mention environmental and health and safety impacts. Effective management of your grey fleet can help reduce these impacts.

Our fleet advice programmes have proved critical for many organisations in achieving significant cost and carbon dioxide (CO₂) savings. Funded by Transport Scotland, the programme has been set up to assist organisations across Scotland, including government, businesses and the public sector.

As well as calculating a fleet carbon footprint, our sustainable transport coordinators can analyse and advise you on:

- lowering running costs
- reducing the environmental impact of fleet activities
- enhancing corporate social responsibility
- meeting duty of care obligations
- data and policy management
- mileage reduction strategies
- zero-emission vehicle adoption

A recent fleet review for a North East business estimated potential annual savings of:

- **£55,500**
- **129 tonnes of CO₂**

So far they have replaced two vans with electric vehicles leading to annual savings of around £3,800 and 6.3 tonnes of CO₂.

To arrange a review, contact your local sustainable transport coordinator, Abigail Betney, today on 01224 253 916 or email abigail.betney@ne.homeenergyscotland.org or talk to us at the Ultimate Business Show on Wednesday 15 June at P&J Live
